

**Zirax announces signing frame contract to deliver UniPell™  
Industrial anhydrous calcium chloride pellets for one of specialty rubber derivatives maker in USA**

Zirax (further referred to as Zirax or Company), one of the global leaders in developing, manufacturing, marketing and supplying of specialty chemicals based on synthetic anhydrous calcium chloride delivered for worldwide customer database, including oilfield service companies, hydrocarbon producers, food industry, mining, construction industries, as well as companies specialized in road winter maintenance, is pleased to announce signing contract to deliver high purity synthetic anhydrous UniPell™ Calcium Chloride pellets for one of the leader in global market of special rubber derivatives located in USA. Name of the customer is not disclosed.

High-purity synthetic calcium chloride anhydrous pellets branded as UniPell™ combine more than 60 various high end applications, which include concrete acceleration, moisture absorption, anti-dusting basis for gravel roads, as well as in mining operations and many others.

Zirax meanwhile continues to develop new advanced industrial applications specifically for high-purity synthetic calcium chloride.

High-purity synthetic anhydrous calcium chloride UniPell™ is not only up-to-date and convenient technological solution for many customer companies. Being synthetic this is solution that quality-wise surpasses several by-product CaCl<sub>2</sub> produced by other companies, that take CaCl<sub>2</sub> liquor as waste from other chemical processes. The highest possible concentration of the product and the lowest content of impurities can be named as one of the main quality advantage of the product.

This allows Zirax customers to save on logistics costs significantly and to guarantee the highest quality of their final products produced using UniPell™ synthetic calcium chloride.

Zirax Overseas Business Development Manager, Anna Shevchenko, noted:

"The main requirement from our USA partner was the highest product quality and low content of impurities. This is explained by the fact that this specific calcium chloride application by our respectable American partner requires exceptional quality characteristics of calcium chloride that can be provided only by product manufactured synthetically.

UniPell™ is a stand alone product produced by the neutralization of calcium carbonate, that comes from own quarry of Zirax by high purity synthetic hydrochloric acid. In this regard, when we sent sample for testing, we were sure that we had more chances to get this deal. Good thing is that our US partner, that had already tested UniPell™ and gave positive comments, has about 30 production sites around the world and this fact allows Zirax to expect steady increasing of shipments to this company. "

**About Zirax:**

Zirax is manufacturer and seller of specialty chemicals based on Calcium Chloride supplied to worldwide customer base.. Zirax Head Office is located in London, UK. Facilities are located in Russia and Western Europe. More information is available at [www.zirax.com](http://www.zirax.com)
