

11 march 2020**ENPAV has announced successful start of production of high quality imidazoline at its site in Volgodonsk.**

Scientific Manufacturing Enterprise «ENPAV» is the leading developer and a major manufacturer – a supplier of functional surfactants and surfactant based products in the Russian market and abroad has announced successful start of production of high quality imidazoline product at its production site in Volgodonsk city.

The new imidazoline product is produced under trade mark IMIDAPAV 135 and meet by its quality characteristics the highest Russian and International quality standards.

It is well known fact that imidazoline is quite popular product at Russian and International market mostly for its application in oil and gas market.

Production of imidazoline is related to usage of the most modern and high technological production equipment, that's why just a few companies in Russia produce imidazoline and most of them in a quantity much less than market consumption. Moreover the authentic imidazoline is a real deficit at market as majority of producers hold the production just of its semifinished fraction – amide amine which consumer characteristics are very far from those that authentic product has to have.

SME ENPAV has surely declared not just start of authentic imidazoline production but will obviously propose to its high respectable customers the variety of its grades in the nearest future upon customers' application for its Biocidal, Conditioning, emulsifying and other properties used starting cosmetics industry and up to heavy metals industries.

Commenting of the installation of imidazoline production line and the successful start of first batches production the Leader of scientific department Elena Hudoleeva said: «We foresee as an excellent future behind the start of this production not just for ENPAV that will be happy to propose to its customers now also the new high quality product at its full range of varieties but as well for the end users that finally will have an opportunity to produce the highest quality product at their one production site thanking to usage of the highest quality imidazoline for that among other ones»
